

FRANCESCA'S PAINTS LTD

FRANCESCA'S ECO EMULSION

Francesca's Eco Emulsion is a breathable paint for interior walls and ceilings with a chalky, matt, velvety finish.

Francesca's Eco Emulsion is an environmentally friendly, water based emulsion paint, free from solvents and all their components. Our Eco Emulsion paint gives excellent coverage and is perfumed with a citrus fragrance. Francesca's Eco Emulsion is wipeable and water resistant but it is not scrubbable.

SUITABLE SURFACES

Our Eco Emulsion Paint is a truly diverse paint which can be applied on:

Previously Painted Walls/ Lime Plaster/ Cement Render / Gypsum Plaster/Concrete /Powdery Plastered Walls

SURFACE PREPARATION

Before application, surfaces must be cleared of loose material, grease, and oil.

Surface Type 1:

Unpainted internal walls such as Lime Plaster, Concrete, Cement Render and Powdery Plastered Walls.

For the above surfaces we have developed a unique binder, Francesca's **Eco Fix**.

Apply one coat of Eco Fix diluted with 4 parts water to 1 part Eco Fix only if the wall is powdery to the touch. (If a film appears on the wall, please add more water, up to 8m parts of water to 1 part of Ecofix, the idea is that the Ecofix must be absorbed into the wall) **VERY IMPORTANT: Over unpainted surfaces there is no need to mist coat the wall, you can paint the Eco Emulsion directly on to the wall, if mist-coating is necessary, please use our Eco Emulsion Paint diluted with up to 50% of water.**

Surface Type 2:

Over previously painted walls:

If the paint is flaking, remove as much old paint as possible. If the paint is not flaking, lightly sand the wall to allow the paint to grip.

Remember that the emulsion paint must be applied on a dry surface.

PLEASE TURN OVER

HOW TO PREPARE OUR ECO EMULSION PAINT

Our Eco Emulsion paint is fully mixed but needs to be diluted with water before application, please follow the dilution chart below.

Colour	1st Coat	2nd Coat
Light/medium	Dilute with 25% of water	Dilute with 20% of water
Dark	Dilute with 10% of water	Dilute with 5% of water

We give guidelines of how to dilute the products, but these are only guidelines. The product might need more or less water than what we say, the reason being that they might have been stored for a while or because they might have just been made, so it is important to understand what consistency our paints should be and add the water according to that. **Francesca's Eco Emulsion Paint should create a continuous flow when pulled from the tub by brush or dip stick. There should not be any blobs of paint falling from the brush or too much running.**

APPLICATION

Francesca's Eco Emulsion Paint can be applied by brush, roller, and spray gun.

Paint within reach. Do not outline first and fill the wall after otherwise a line will show. Keep a wet edge.

Leave at least 8 hours before applying the second coat. **FOR MEDIUM / DARK COLOURS WAIT 24 HOURS TO APPLY SECOND COAT.** Do not apply in temperatures below 5C or over 30C. **Avoid retouching the final coat.**

COVERAGE 1 litre covers approximately 12 square meters per coat depending on the porosity of surface.

CLEANING

Remove as much emulsion paint as possible from application equipment before washing. Wash tools immediately after use in warm soapy water and rinse thoroughly. Do not empty emulsion into drains or watercourses.

Contains NO ADDED LEAD.

GENERAL INFORMATION

Colour variation can occur between batches due to the natural pigments used, therefore, it is recommended that all Francesca's Eco Emulsion Paint be purchased at the same time. Keep the lid tightly on. Keep out of reach of children. Do not swallow and avoid eye contact. If accidental contact occurs, rinse eyes with copious amounts of water.

WHEN USING MORE THAN ONE TIN OF COLOUR IN THE SAME ROOM, INTERMIX BEFORE USE.
